

Inner Classes

1. What is the internal code generated by the compiler for member inner classes?
2. What are the two ways to create an anonymous inner class?
3. Can we access the non-final local variable inside the local inner class?
4. How to access the static nested class?
5. Can we define an interface within the class?
6. Can we define a class within the interface?
7. Difference between nested class and inner class in Java
8. Different types of nested classes.
9. WAP that contains the static nested class.
10. WAP that contains the local inner class.
11. WAP to demonstrate member inner class.
12. WAP to demonstrate anonymous inner class using both techniques (class: may be abstract or concrete and interface) .
